Chapter 1

Propositional Logic

connective, sentence symbol, L-symbol, L-expression:

```
\begin{array}{c} \textbf{Definition 1.1} & a & b \\ 1. & \textbf{Connec} := \{\neg, \lor, \land, \rightarrow, \leftrightarrow\} \\ 2. & \textbf{SentSymb} := \{p_n \mid n \in \omega\} \\ 3. & \textbf{Symb}_L := \textbf{Connec} \cup \textbf{SentSymb} \\ 4. & \textbf{Expr}_L := {}^{<\omega} \textbf{Sent}_L \\ & & \textbf{dfn\_Connec} \\ & & \textbf{dfn\_Symb} \\ & & \textbf{dfn\_Symb} \\ & & \textbf{dfn\_Symb} \\ & & \textbf{dfn\_Symb} \\ & & \textbf{dfn\_Expr} \\ & & & \\ \hline & & & \\ & & & \\ \hline & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\
```

concatenation:

Definition 1.2
$$f \ \widehat{} \ g \coloneqq \{\langle n+\mathrm{dom}(f),g(n)\rangle \mid n\in\mathrm{dom}(g)\}$$
 — label: dfn_conc

$$\textbf{Convention 1.3} \quad [s_{\textbf{0}}, \dots, s_{\textbf{n}}] \quad / \quad s_{\textbf{0}} \dots s_{\textbf{n}} \longrightarrow \text{Syn. for } \{\langle 0, s_{\textbf{0}} \rangle, \dots, \langle n, s_{\textbf{n}} \rangle\}$$

L-atomic sentence:

$${\sf AtSent}_L := {}^1{\sf SentSymb}$$
 See: ${\sf SentSymb}$ — label: ${\sf dfn_AtSent}$ — ${}^a {}^n X := \{f \mid f \colon n \to X\}$: the set of all n -term sequences on X

• AtSent_L =
$$\{[s] \mid s \in \mathsf{SentSymb}\}$$

 $\bullet \ \, \mathsf{AtSent}_L \subseteq \mathsf{Expr}_L$

definition by recursion:

Theorem 1.5
$$\begin{cases} z\in Z\\ G\colon Z\times\omega\to Z \end{cases} \to \exists ! F\colon \omega\to Z \ \begin{cases} F(0)=z\\ \forall n\in\omega\ F(n^+)=G(F(n),n) \end{cases}$$

(X, A, \mathcal{H}) is an induction system:

Definition 1.6 ^a

$$\operatorname{Ind}(X, A, \mathcal{H}) : \leftrightarrow \begin{cases} A \subseteq X \neq \emptyset \\ \forall H \in \mathcal{H} \ \exists n \in \omega \ (H \colon X^n \to X) \end{cases}$$

— label: dfn_Ind

$$\begin{tabular}{ll} \begin{tabular}{ll} \begin{tabular}{ll} a By Theorem 1.5, $\exists !F$: $\omega \to \mathbf{U}$ } \begin{tabular}{ll} & F(0) = 1 \\ \forall n \in \omega \ F(n^+) = \begin{tabular}{ll} X & \mbox{if $n = 0$} \\ F(n) \times X & \mbox{if $n > 0$} \end{tabular} . \label{eq:constraints} . \label{eq:constraints} \end{array}$$

 $!n \in \omega \text{ (dom}(H) = X^n)$. Define $k_{H,X}$ as n:

$$\exists n \in \omega \ (H \colon X^n \to X) \to \begin{cases} k_{H,X} \in \omega \\ \mathrm{dom}(H) = X^{k_{H,X}} \end{cases}$$

. Thus

$$\operatorname{Ind}(X,A,\mathcal{H}) \leftrightarrow \begin{cases} A \subseteq X \neq \varnothing \\ \forall H \in \mathcal{H} \ \begin{cases} k_{H,X} \in \omega \\ H \colon X^{k_{H,X}} \to X \end{cases} \end{cases}$$

. Write meta- $k_{H,X}$ as $\mathbf{k}_{H,X}$.

Theorem 1.7

 $\operatorname{Ind}(X, A, \mathcal{H}) \to$

$$\exists ! F \colon \omega \to \wp(X) \ \begin{cases} F(0) = A \\ \forall n \in \omega \ F(n^+) = F(n) \cup \\ \begin{cases} H(x_1, \dots, x_{\mathbf{k}_{H,X}}) \ \middle| \ \begin{cases} H \in \mathcal{H} \\ x_1, \dots, x_{\mathbf{k}_{H,X}} \in F(n) \end{cases} \end{cases} \end{cases}$$

See: $\operatorname{Ind}(X, A, \mathcal{H})$ — label: thm recmap

Definition 1.8 Define: (X, A, \mathcal{H}) as F in Theorem 1.7:

$$\operatorname{Ind}(X, A, \mathcal{H}) \to$$

$$\begin{cases} (X,A,\mathcal{H})\colon \omega \to \wp(X) \\ (X,A,\mathcal{H})(0) = A \\ \forall n \in \omega \; (X,A,\mathcal{H})(n^+) = (X,A,\mathcal{H})(n) \cup \left\{ H(x_1,\dots,x_{\mathbf{k}_{H,X}}) \; \middle|\; \begin{cases} H \in \mathcal{H} \\ x_1,\dots,x_{\mathbf{k}_{H,X}} \in (X,A,\mathcal{H})(n) \end{cases} \right. \end{cases}$$

See: $\operatorname{Ind}(X,A,\mathcal{H})$ — label: dfn_recmap

Convention 1.9

1. $(X, A, \mathcal{H})_n$ / X_n — Syn. for $(X, A, \mathcal{H})(n)$

2. \mathcal{X} — Syn. for (X, A, \mathcal{H})

See: $\operatorname{Ind}(X, A, \mathcal{H})$ / (X, A, \mathcal{H})

$$\mathcal{X}_n \equiv (X, A, \mathcal{H})_n$$

inductive closure of A under \mathcal{H} :

Definition 1.10

$$\overline{(X,A,\mathcal{H})}\coloneqq\bigcup_{n\in\omega}(X,A,\mathcal{H})_n$$

See: (X, A, \mathcal{H})

— label: dfn_clos

 $\overline{(X, A, \mathcal{H})} = \{ x \in X \mid \exists n \in \omega \ (x \in (X, A, \mathcal{H})_n) \}$

Theorem 1.11 $\operatorname{Ind}(X, A, \mathcal{H}) \rightarrow$

1.

 $\forall n \in \omega \ (A \subseteq (X, A, \mathcal{H})_n \subseteq X)$

2.

 $A \subset \overline{(X, A, \mathcal{H})} \subset X$

See: Ind (X, A, \mathcal{H}) / (X, A, \mathcal{H}) / $\overline{(X, A, \mathcal{H})}$

— label: thm_recmap_minmax thm clos minmax

Definition 1.12

1.

 $H_\neg \colon \mathsf{Expr}_L \ni \phi \mapsto [\neg] \mathbin{\widehat{\hspace{1ex}}} \phi$

 $2. \bullet \equiv \lor, \land, \rightarrow, \leftrightarrow$

 $H_{\bullet} \colon \mathsf{Expr}_L \times \mathsf{Expr}_L \ni \langle \phi, \psi \rangle \mapsto [\bullet] \, \widehat{} \, \phi \, \widehat{} \, \psi$

3.

 $\mathcal{H}_{\mathsf{Sent}} \coloneqq \{H_{\neg}, H_{\lor}, H_{\land}, H_{\rightarrow}, H_{\leftrightarrow}\}$

See: Expr_L / $f \cap g$

— label: dfn_H_lnot dfn_H_connec dfn_HSent

- $\begin{array}{ll} \bullet & H_{\neg}(\phi), \ H_{\bullet}(\phi) \in \mathsf{Expr}_L \\ \bullet & k_{H_{\neg},\mathsf{Expr}_L} = 1, \ k_{H_{\bullet},\mathsf{Expr}_L} = 2 \end{array}$
